

Brugg (Switzerland), 19th of April 2023

Swiss 3D printing systems now also represented in Spain

Swiss 3D printing manufacturer Sintratec and Maquinser S.A. from Spain are entering into a new partnership. Maquinser thereby becomes the first supplier of the modular SLS solutions on the Iberian Peninsula, expanding Sintratec's distribution and service network in the Mediterranean region.

Headquartered in the region of Barcelona, [Maquinser S.A.](#) has more than three decades of experience in the distribution of machine tools and high-tech equipment and works with leading brands such as **HP, Matsuura, or GE Additive**. The company offers a wide range of industrial solutions, including turning and milling, horizontal machining, additive manufacturing multifunction machinery. With a large network of service centers in the main areas of the

Iberian Peninsula, Maquinser further ensures efficient support and customer proximity.

The partnership with [Sintratec](#) expands Maquinser's product range with the Sintratec **All-Material Platform (AMP)** - a modular 3D printing system that sets new standards for material diversity, flexibility and scalability in the field of selective laser sintering (SLS). Maquinser thus becomes the first Sintratec representative in Spain and Portugal and is already presenting the Swiss SLS technology at the **Advanced Machine Tools** trade show in Barcelona in April. For Sintratec, this partnership means a valuable expansion of its Southern European distribution and service network as well as an entry into the emerging Iberian market.

From left to right: Anton Bravo Ribó (3D Manager Maquinser S.A.), Joan Jubany (Marketing Maquinser S.A.)

Anton Bravo Ribó, 3D Manager Maquinser S.A.:

«Adding Sintratec to our represented brands is a step forward for us and for the Iberian market. It allows us to expand our value chain to a wide range of companies, covering all their production and quality needs.»

Sintratec is the leading Swiss developer and manufacturer of precise 3D printers for professional use. The systems employ the selective laser sintering (SLS) technology in order to process industrial-grade materials. By means of the Sintratec Technology, users can create complex objects with an exceptionally high freedom of design. Whether stiff or flexible, Sintratec materials are highly resilient and temperature-resistant.

Sintratec systems are in operation worldwide in various industries, research institutes and universities. Founded in 2014, Sintratec managed to grow into a leading technology company.
