Sintratec 3D printers make debut in Mexico

Swiss 3D printer manufacturer Sintratec and Sun Digital have entered into a partnership. The company, which is one of the most important providers of digital printing solutions in Mexico, thereby expands its offering to include industrial 3D printing.

For more than 50 years, Mexico City-based [Sun Digital](#) has specialized in the sales and service of color printers, as well as label and packaging printing. As the exclusive partner for [HP Indigo](#) digital presses, the company has firmly positioned itself in the Mexican market. With a newly formed Additive Division, Sun Digital is now looking to enter the emerging 3D printing sector – also with the

selective laser sintering process (SLS) from [Sintratec](#), among other technologies.

The Swiss manufacturer's compact and expandable SLS systems offer an ideal first step into the world of industrial additive manufacturing. Furthermore, the new Sintratec [All-Material Platform](#) completes Sun Digital's portfolio with a modular manufacturing solution that combines scalability, multi-material capability and throughput. For Sintratec, this partnership represents an important entry into the Mexican market and an expansion of its North American sales and service network.

Gabor Koppanyi, Head of Marketing & Sales Sintratec:

«With Sun Digital we have gained a competent, industry-oriented specialist with many years of experience, who will now represent the Sintratec products for the first time in the promising Mexican market. We are convinced that customers and prospects in Central America will benefit greatly from Sun Digital's expanded offering and its service network.»

Ricardo del Castillo, Innovation Manager Sun Digital Additive Division:

«We are thrilled to announce our partnership with Sintratec. By bringing their 3D printing solutions to the Mexican market, we are confident that Sintratec's innovative products will deliver exceptional value. As we join forces, we anticipate a broader spectrum of companies and clients, shaping the future and unlocking limitless possibilities for innovation and growth.»

Sintratec is the leading Swiss developer and manufacturer of precise 3D printers for professional use. The systems employ the selective laser sintering (SLS) technology in order to process industrial-grade materials. By means of the Sintratec Technology, users can create complex objects with an exceptionally high freedom of design. Whether stiff or flexible, Sintratec materials are highly resilient and temperature-resistant.

Sintratec systems are in operation worldwide in various industries, research institutes and universities. Founded in 2014, Sintratec managed to grow into a leading technology company.
