3DPrintaj: First Sintratec representative in Croatia

Sintratec is expanding its Eastern European distribution and service network through a partnership with Croatian company 3DPrintaj. Thereby, 3DPrintaj becomes the first representative of the Swiss SLS systems in Croatia.

As part of the Croatian company [Mikrotvornica](#), Zagreb-based [3DPrintaj](#) offers a wide range of services in the 3D printing sector: From local print service, training and support, to professional consulting on choosing the right printer and accessories. The team of experts aims to enable companies, institutions, and individuals to optimally use additive manufacturing solutions in their respective industries. In just 6 years on the market, 3DPrintaj has already installed more than 930 systems and helped over

2000 customers to realize their projects.

In addition to FDM and DLP machines from renowned suppliers such as Phrozen, Raise3D or Zortrax, 3DPrintaj is now expanding its product portfolio to include selective laser sintering (SLS) through a new partnership with Swiss company [Sintratec](#). Especially with the increased production capabilities of the modular Sintratec [All-Material Platform \(AMP\)](#), 3DPrintaj will be able to address even more customer requirements in the future. For Sintratec, the partnership marks an important step towards Eastern Europe. The Swiss-made high-tech systems will thus be represented for the first time in the regional market of Croatia, Bosnia and Herzegovina, and Slovenia.

Nikola Blažević, Founder & CEO 3DPrintaj

«With the Sintratec technology we are able to meet the highest production and technical standards. It will allow us to produce 3D printed parts in a way we weren't able to do before to meet our clients special application needs. Specifically, we are looking forward to producing batches of 3D prints made in SLS with industrial grade materials.»

Sintratec is the leading Swiss developer and manufacturer of precise 3D printers for professional use. The systems employ the selective laser sintering (SLS) technology in order to process industrial-grade materials. By means of the Sintratec Technology, users can create complex objects with an exceptionally high freedom of design. Whether stiff or flexible, Sintratec materials are highly resilient and temperature-resistant.

Sintratec systems are in operation worldwide in various industries, research institutes and universities. Founded in 2014, Sintratec managed to grow into a leading technology company.
